PREFACE.

THE following Table of Mohammedan Dates has been prepared by the Rev. J. E. Hanauer, Jerusalem. The dates may be a day or two in error. Since they depend upon the relative position of the sun and moon, latitude and longitude, times of year, &c., they are not easy to work out with great accuracy. The month does not commence at new moon, but begins at sunset *on the day when the moon is first visible after the sun has set.* This is generally two days after new moon, but it varies in different places. In modern times it is usual to fix the date at some central place, such as Constantinople, when the new moon is seen, and to telegraph it to other places; but it causes a difficulty with regard to old dates.

In the majority of cases the dates given in the tables, in the earlier centuries, are one day earlier than those given in the tables of Mr. Stanley Lane Poole, but in some cases they agree. In the later years, 1851 to 1900, the day of new moon is given, and the dates are, consequently, two days earlier than those in Mahmûd Pasha's Egyptian Calendar.

THE CHRISTIAN AND THE MOHAMMEDAN ERAS.

A TABLE of the Christian and the Mohammedan Eras, from July 15th, A.D. 622, the date of the Hejira, to A.D. 1900. Extracted from the Canons of Sultan Ulug Beg, Grandson of Tamerlane, from the Edition of the learned Grævius, as given in Richardson's English, Persian and Arabic Dictionary—Wilkin's Edition, London, 1810. The Mohammedan Year is Lunar. The months consist alternately of 29 and 30 days. To the last month an intercalary day is added 11 times during every 30 years, viz., to the 2nd, 5th, 7th, 10th, 13th, 15th, 18th, 21st, 24th, 26th and 29th, which are therefore called "abounding" years, and have 355 days, the others having only 354 days. In the following Tables these "abounding" years are indicated by * and our Leap Years by —. The dates as given are believed to be accurate, but they may be a day in error in some cases.
